

PRESS RELEASE

Tahoe Fire and Fuels Team

For Immediate Release

April 2, 2018

Widespread prescribed fire operations resume at Lake Tahoe

Contact: U.S. Forest Service, Lisa Herron (530) 543-2815

SOUTH LAKE TAHOE, Calif. – Members of the Tahoe Fire and Fuels Team (TFFT), which includes local, state and federal agencies, will resume prescribed fire operations this week in multiple locations around the Lake Tahoe Basin. Weather and conditions permitting, Tahoe Douglas Fire Protection District, California State Parks, California Tahoe Conservancy and the U.S. Forest Service will conduct prescribed fire operations in Sugar Pine Point and Burton Creek state parks on the West Shore, near Carnelian Bay and Kings Beach on the North Shore, near Logan Shoals on the East Shore and on Kingsbury Grade near Edgewood Creek and on urban lots off Ski Run Boulevard on the South Shore. Smoke may be present. A map with project locations and details is available for viewing at <http://www.tahoefft.org>. To receive prescribed fire notifications, send an email to pa_ltbfmu@fs.fed.us.

Whenever weather and conditions allow, prescribed fire operations are conducted by the TFFT to reduce overgrown vegetation, which decreases the severity of future wildland fires and protects communities. After nearly a century of fire exclusion in the Sierra Nevada, prescribed fire operations also re-introduce fire back onto the landscape, which helps restore vital ecosystem functions and improve forest health and resiliency.

Each prescribed fire operation follows a specialized prescribed fire burn plan that considers temperature, humidity, wind, moisture of the vegetation, and conditions for the dispersal of smoke. This information is used to decide when and where to burn.

The TFFT coordinates closely with local county and state air pollution control districts and monitors weather conditions carefully prior to prescribed fire ignitions. They wait for favorable conditions that will carry smoke up and out of the basin. Crews also conduct test burns before igniting larger areas, to

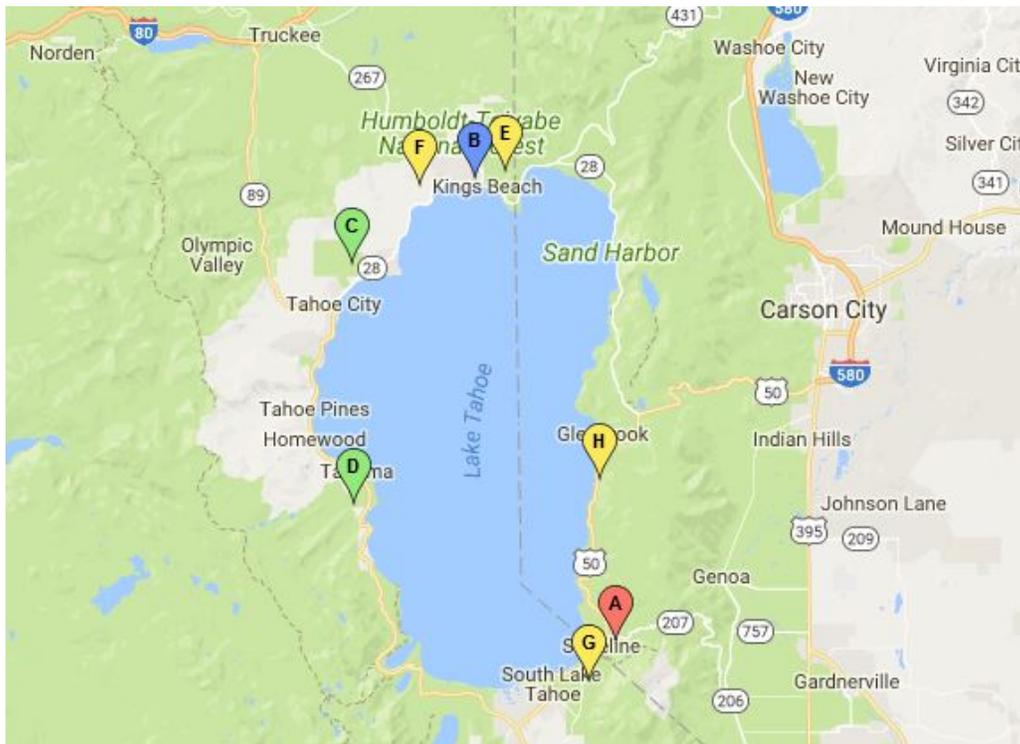

verify how effectively fuels are consumed and how smoke will travel. When conditions meet the prescription, state and local air pollution control districts issue a burn permit allowing operations to proceed.

Smoke from prescribed fire operations is normal and may continue for several days after an ignition depending on the project size and environmental conditions. Keep in mind that prescribed fire smoke is generally less intense and of much shorter duration than smoke produced by a wildland fire. Smoke sensitive individuals are encouraged to reduce their exposure by staying indoors if they are in a smoke affected area.

When prescribed fire operations are conducted, the TFFT posts road signs around areas affected by prescribed fire, sends email notifications and updates the local fire information line at 530-543-2816. The TFFT gives as much advance notice as possible before burning, but some operations may be conducted on short notice.

###

About the Tahoe Fire and Fuels Team

The Tahoe Fire and Fuels Team (TFFT) consists of representatives of Tahoe Basin fire agencies, CAL FIRE, Nevada Division of Forestry and related state agencies, University of California and Nevada Cooperative Extensions, the Tahoe Regional Planning Agency, the U.S. Forest Service, conservation districts from both states, the California Tahoe Conservancy and the Lahontan Regional Water Quality Control Board. Our Mission is to protect lives, property and the environment within the Lake Tahoe Basin from wildfire by implementing prioritized fuels reduction projects and engaging the public in becoming a Fire Adapted Community.
