

PRESS RELEASE

Tahoe Fire and Fuels Team

For Immediate Release

November 9, 2017

Widespread prescribed fire operations continue around Lake Tahoe

Contact: U.S. Forest Service, Lisa Herron (530) 543-2815

SOUTH LAKE TAHOE, Calif. – Lake Valley, North Lake Tahoe and Tahoe Douglas fire protection districts, California State Parks, California Tahoe Conservancy and the U.S. Forest Service will continue Lake Tahoe Basin prescribed fire operations over the next several weeks, weather permitting. Operations are scheduled to take place at or near D.L. Bliss State Park, Carnelian Bay, Kings Beach, Incline Village, Diamond Peak Ski Resort area, Glenbrook, upper and lower Kingsbury Grade and south and east of the Lake Tahoe Airport. View a map with project locations and details at <http://www.tahoefft.org>. Smoke may be visible. To receive prescribed fire notifications, send an email to pa_ltbtmu@fs.fed.us.

When weather and conditions allow, prescribed fire operations are conducted to reduce excess vegetation that can feed wildland fires. After nearly a century of fire exclusion in the Sierra Nevada, prescribed fire re-introduces fire back onto the landscape, which helps restore vital ecosystem functions and improves forest health and resiliency.

Fall and winter bring cooler temperatures and precipitation, which favor prescribed burning. Each prescribed fire operation follows a specialized prescribed fire burn plan, which considers temperature, humidity, wind, moisture of the vegetation, and conditions for the dispersal of smoke. This information is used to decide when and where to burn.

Agencies coordinate closely with local county and state air pollution control districts and monitor weather conditions carefully prior to prescribed fire ignitions. They wait for favorable conditions that will carry smoke up and out of the basin. Crews also conduct test burns before igniting larger areas, to verify how effectively fuels are consumed and how

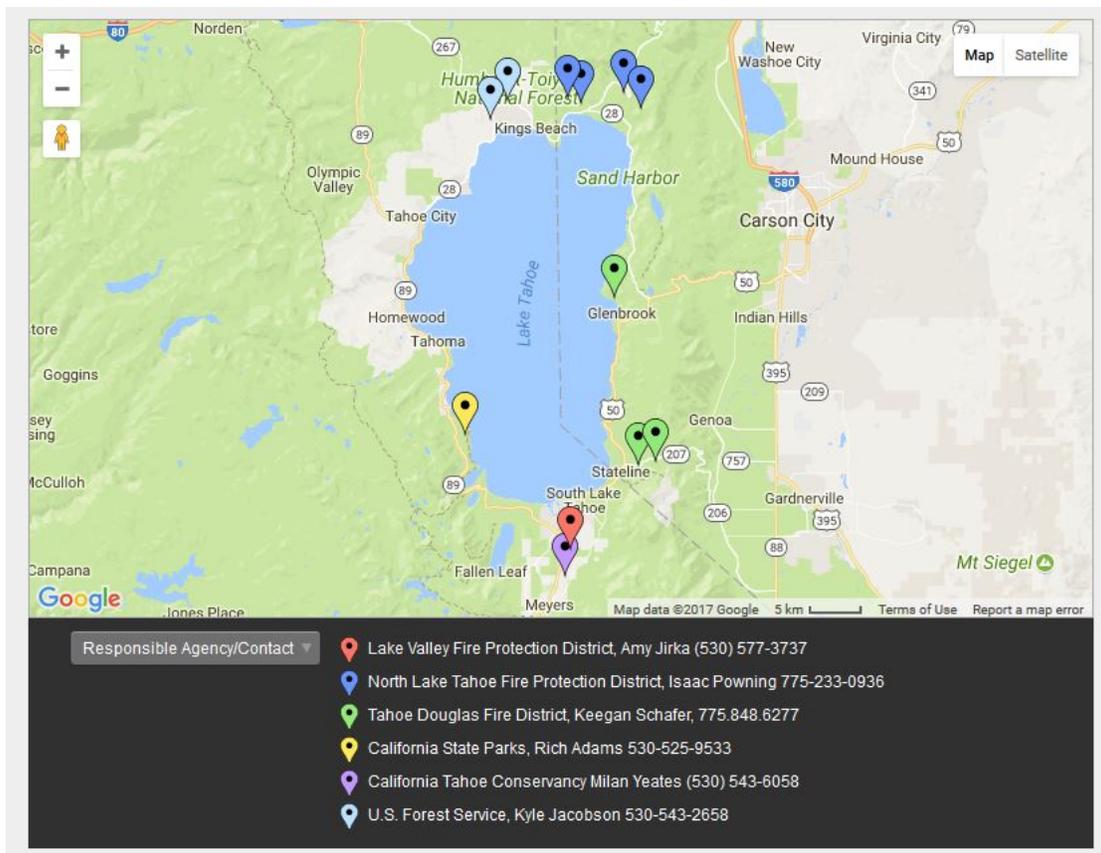

smoke will travel. When conditions meet the prescription, state and local air pollution control districts issue a burn permit allowing operations to proceed.

Smoke from prescribed fire operations is normal and may continue for several days after an ignition depending on the project size and environmental conditions. Prescribed fire smoke is generally less intense and of much shorter duration than smoke produced by a wildland fire. Smoke sensitive individuals are encouraged to reduce their exposure by staying indoors if they are in a smoke affected area.

Before prescribed fire operations are conducted, agencies post road signs around areas affected by prescribed fire, send email notifications and update the local fire information line at 530-543-2816. The TFFT gives as much advance notice as possible before burning, but some operations may be conducted on short notice.

###

About the Tahoe Fire and Fuels Team

The Tahoe Fire and Fuels Team (TFFT) consists of representatives of Tahoe Basin fire agencies, CAL FIRE, Nevada Division of Forestry and related state agencies, University of California and Nevada Cooperative Extensions, the Tahoe Regional Planning Agency, the U.S. Forest Service, conservation districts from both states, the California Tahoe Conservancy and the Lahontan Regional Water Quality Control Board. Our Mission is to protect lives, property and the environment within the Lake Tahoe Basin from wildfire by implementing prioritized fuels reduction projects and engaging the public in becoming a Fire Adapted Community.
